Product information on Ammonium Chloride Food Grade (RWS) Discharge, storage and handling recommendations

Ammonium Chloride Food Grade is a fine crystalline and colorless solid. For proper handling, the following information and the information on the label and in the safety data sheet must be observed. In addition, the precautionary and industrial hygiene measures required when handling chemicals must be observed.

Discharge

Unloading must take place in dry locations. Only intact packaging materials from which no product can escape may be stored or transported. The packaging must be protected from moisture.

Storage

Ammonium Chloride RWS should be stored in closed containers in a cool, dry, and well-ventilated place. A storage temperature of <30°C at a relative humidity of <60% is recommended. The products must be protected against moisture, e.g., also condensation water. Direct exposure to heat, UV radiation, as well as constant major temperature fluctuations must be avoided. Ammonium Chloride RWS must be stored and transported separately from alkalis, base-forming substances, nitrites, oxidizing agents, and sodium nitrate. Adequate ventilation must be provided, and dust formation must be avoided. The product shelf life in the original, unopened packaging material is up to the Best Before Date on the label. The flowability depends on the storage conditions. An increased tendency to caking may occur in particular after 12 months - or even earlier if the recommended storage conditions are not observed. If the storage time has been exceeded, a decision can be made on the continued use of the product by checking the active ingredient content under one's own responsibility.

Handling

When handling the products, personal protective equipment must be worn in accordance with the activity-specific risk assessment. To avoid overstocking, the FIFO (First-In-First-Out) principle is recommended. Spilled product must under no circumstances be filled back into the containers, but must be disposed of in accordance with national regulations. Damaged containers must be disposed of in a qualified manner.

Legal notice

The transport, storage, use and handling of Ammonium Chloride RWS are subject to the laws and other applicable regulations of the countries in which these activities take place (e.g. chemical laws, hazardous materials laws, transport laws, etc.). These regulations must be strictly observed by the user in all cases, irrespective of the information in this publication.

Disclaimer

The information in this publication is based on our present knowledge and experience and is not legally binding. They do not exempt the user from carrying out his own tests and trials, among other things because of the wide range of possible influences during processing and application of our product. A guarantee or assurance of certain properties or the suitability of the product for a specific application cannot be derived from our information. All descriptions, drawings, photographs, data, ratios, weights and the like contained herein are subject to change without notice and do not represent the contractually agreed quality of the product. Any property rights as well as applicable laws and regulations are to be observed by the recipient of our product on his own responsibility.
